Abstract:

TITLE: EMBALMING FORCEPS APPLICANT: SREE BALAJI MEDICAL COLLEGE AND HOSPITAL, BIHER ABSTRACT The present invention discloses an embalming forceps for dissection of superficial fascia and deep fascia, tracing blood vessels and simultaneously grasping and locking blood vessels thereby preventing damage of adjacent tissue around the blood vessels during embalming procedure and routine cadaveric dissection studies. The embalming forceps of the present invention comprises of a two rear end [1] diverged into first arm [2] with blunt free end [13] and second arm [3] with blunt free end [13] in which each arm has proximal section close to the rear end distal section close to the blunt free end [13] and corrugated [4] on outer surface in the proximal section of the first arm [2] and second arm [3] to provide grip, character that the distal section of the first arm [2] and second arm [3] before the blunt free ends [13] at a predetermined length is moulded into an arterial curve [5,6] of 2/3rd ends of the curve is provided with tooth [8,10] and socket [7,9] in a reciprocal manner on the first arm [2] and second arm [3] configured to lock the arterial curves [5, of the tooth [8,10] and socket [7,9] by approximation of the first arm [2] and second arm [3] thereby forming a vascular ring for tracing, grasping and locking vessels to proper raising and grip of vessels in appropriate position without any damage of adjacent structure around the blood vessels during embalming procedure in addition to blunt dissection using the blunt free ends [13] having outer side flat portions [11] and inner side jaw portions [12].
